PROFILE SUMMARY

Results-driven Software Developer with **more than 2 years** of experience in solution design, development, and deployment of scalable, secure, and enterprise-grade web applications. Proficient in **Java 17+**, **Spring Boot**, **Angular 19+**, **JavaScript**, **REST APIs**, and **MySQL**. Hands-on experience in API development, responsive UI design, state management, custom component development, and UI libraries such as **Angular Material** and **PrimeNG**, with successful **integration of 50+ APIs**. Experienced in Agile development, microservices, and DevOps practices, with a passion for building AI-powered solutions, including ChatGPT integrations, intelligent automation tools, and real-time dashboards to deliver business-focused, future-ready applications.

TECHNICAL SKILLS

Languages : C, Java 17+, JavaScript (ES6), TypeScript, SQL

Frameworks & Libraries : Angular 19+, Spring boot, Hibernate, React, PrimeNg, Node.js

Databases : MySQL, PostgreSQL

DevOps : Docker, AWS, CI/CD, S3

AI & Tools : ChatGPT, Gemini, Claude code, Github copilot

Others : Vs-code, IntelliJ, STS, Git, SVN, Postman, microservices

WORK EXPERIENCE

Software Engineer, Freelance

July 2023 – Present

- Developing erp-mes solution for bakery plant with features recipe management, costing, billing, production planning and stock tracking.
- Implemented a billing module using **Angular**, **Spring Boot** and MySQL as database replacing traditional billing system, **generating monthly 300+ bills**.
- Used **AI-First approach** for faster development of APIs and faster release cycle.
- Implemented Custom pricing logic for customers, enabling dynamic **product-level price selection**.
- Working on Inventory Tracking module for inventory tracking and management.

Jr Software Engineer, Elogix Software

Nov 2021 – Jun 2023

Project 1 : TNA

- Developed SPA frontend using **Angular**, **ES6**, **JS**, **TypeScript** enabling user to get virtual training and self assesment, improving responsiveness and cross-device user experience
- Implemented Content Creation Service using Spring Boot, **uploading 1000+ resources** of type document, audio, and video.
- Built reusable UI components to enhance maintainability and **reduced code duplication by 33%**.
- Improved **JWT** and **OAuth2** authentication workflows using **Java** and **Spring Boot**.
- Resolved critical bugs and optimized performance, achieving **~10% improvement**.

Project 2 : VIDHI

- A product designed to organize, track, and analyze company resources.
- Developed frontend features using **React.js**, **managing state** and integrating APIs with **Axios**.
- Implemented efficient data handling for large datasets in lists and tables using strategies like **lazy loading** and state optimization, **improving performance by ~25%**.
